

Gibson origin Re-TRAC sheet

2026-09-03. Gibson County, Indiana. Origin only.

What this is. All reported Gibson-origin tons in 2024 versus the same quarter in 2023, as filed with IDEM. Permit 26-06 is Restricted Waste Site Type I at Gibson Generating Station South Landfill: on-site CCR and related industrial tons, not MSW. That door is 97.8% of the file. One origin. Held-out 2024.

What happened. 97.7% in 2023 and 97.8% in 2024 stayed on site at 26-06. The Q3 residual of +83,255 tons is more restricted-waste output at that landfill. Blackfoot (Pike County) is the largest remaining door, about 20,000 tons in 2024. Velpen C&D;, Laubscher, Evansville Transfer, and Covanta follow. New in 2024 among the small remainder: Warrick Processing Center (Q2, 833 tons). Gone in 2024 (had Gibson tons in 2023, none in 2024): Bicknell Yard - Mullins Supply, Caldwell Environmental, Hoosier Landfill 2, EQ Industrial Services.

Two answers, not averaged, on all reported tons including RWS Type I. Plants: last year beats inverse-miles on the 35 cells where 2023 exists (RMSE 15,596.8 vs 35,014.7 tons). The bar is inverse-miles among the 21 Gibson train destinations, not truck routing. It puts 72.43% on 26-06; actual is about 98%; last year copies 98%. County total: last year misses the four 2024 quarter totals (RMSE 45,939.1). The miles bar is scaled to each quarter's observed total, so its total error is zero by construction.

How to read a row. 2023 tons, 2023 share of that quarter, 2024 tons, 2024 share, residual. Residual = 2024 tons - 2023 same-quarter tons at that plant. It is not last year's share applied to this year's total. Q3 at 26-06 is +83,255 because restricted-waste tons at that site rose, not because a county MSW share moved.

Source. IDEM public quarterly reports, 2021 to 2025. This file is the join. CSV of the same 48 rows is the second attachment.

Blank bar share means last year was missing, so that row is not in the 35-cell RMSE. Loc is point or centroid. Centroid = host-county centroid; 26-06 (the 98% plant) is a centroid.

Gibson 2024 origin-facility-quarter tons

Last year (orange). Inverse-miles (grey-blue).

Figure 1. Observed 2024 tons versus last year (orange) and inverse-miles (grey-blue). The four points on the right are 26-06, Restricted Waste Site Type I. Last year tracks that on-site door; miles sit low because they spread 27% of the bar to other doors.

26-06 at 0.98. The rest at the origin.

Figure 2. Each plant's 2023 share vs 2024 share. 26-06 is the point at 0.98. Everything else is in the corner at 0. This is the monopoly chart.
