

Gibson origin Re-TRAC sheet

2026-09-03. Gibson County, Indiana. Origin only.

On Gibson origin-facility-quarter cells, do last year’s same-quarter shipments beat mileage-plus-population on held-out 2024?

Gibson County origin tons, 2024, versus 2023 same quarter. One origin. Held-out 2024.

Cells: last year 15596.8 tons RMSE against mileage-plus-population 35014.7 on 35 cells.

Total: last year misses the four quarter totals (RMSE 45939.1 tons). The bar is scaled to the observed total, so its total error is zero by construction.

Held share 5% or more: Gibson Generating Station RWS 1 South Landfill (97.7% in 2023, 97.8% in 2024). Share that moved: new in 2024: Warrick Processing Center; 2023 destinations with no 2024 Gibson tons: Bicknell Yard - Mullins Supply, Caldwell Environmental, Hoosier Landfill 2, EQ Industrial Services Processing Facility.

How to read a row: 2023 tons, 2023 share, 2024 tons, 2024 share, residual. A positive residual means 2024 sent more to that plant than 2023’s habit.

What is missing

- Miles: great-circle.
- Centroids: nine destinations sit on the host-county centroid.
- Out-of-state origins: dropped.
- County total: last year does not know 2024’s Gibson total.
